Large Single Strap Hangers	Pairs	5600-3063
Twisted Ring Latch for Sliding Doors	each	4151-0SP
Use Heavy Hasps (Page 21) and Cane Bolts to Lock Doors (Page 32/33)		

# Old Fashioned Rolling Door Hardware

Manufactured in Connecticut, these barn door rollers and track are copies of old rollers that are virtually unavailable as the originals wear out and the supply of replacements in antique shops dwindles.

They are used on new and restored homes, carriage buildings and barns. Ideally suited for interior renovations.

We carry four sizes and two styles. All sizes have a wheel with five spokes

Castings for the wheels are ductile iron with a stainless steel pin. The body of the hangers and the track are made of 1/4" steel and are finished with a high quality textured exterior grade powder coat.

The standoffs, when applied directly to the building will allow for a door up to 2" thick. Thicker doors can be accommodated by using standoff extensions (available in 1/4", 1/2" and 1" thicknesses) if the door exceeds 2" in thickness applied to the building prior to installation of the standoffs.

Fasteners are included (for doors up to 2" thick). Lag bolts for the track must be ordered separately. This product line is black powder coated over an "E coat" rust protection layer. "E" coating is very common in the auto industry but does not offer the same degree of protection against rust as hot dipped galvanized.

Product Specifications and Installation Instructions are available on our web site.
